

MODMAX DEVOTEES OFFICIAL WELCOME AND INDOCTRINATION SHEET

Thank you much for purchasing one or all of the MODMAX Filter pedals! Several years of development and hundreds of hours of careful design and truly grueling testing have produced a product we are very proud to stamp with the STUDIO ELECTRONICS 'Impramatur/Nihil Obstat', and, *finally* present to you: the all-knowing User.

The singular design of this pedal allows one to independently and dynamically manipulate 4 key sonic parameters simultaneously: Filter (Phaser) sweep, Effect mix, LFO rate, and LFO depth - with modulation both positive or negative. Additionally, the MODMAX platform's switchable filter mode, 3 Phasor stage choices, effect level overdrive, an LFO 'comfortable' with audio frequencies mod., and 3 different waveforms and triggering modes should bring you many seasons of manipulated musical magic.

Don't fear the MODMAX:

For those not used to a stomp box with so many controls... have no fear! At its core the MODMAX Filter is just a traditional envelope following filter with an LFO. The sophistication lies in its powerful dynamic level control. You can use it in its simplest format or demand more: slip 'soundfully' into the sinister sonic struggle far below the surface of the seen... Just be sure to press record first!

Getting started:

Use the INPUT level and ATTACK and RELEASE controls to set the trigger point of the dynamically sensitive controls, i.e., filter sweep; effect mix; LFO rate; LFO depth, to achieve the desired dynamic response. For optimal dynamic performance remember this key concept: *TICKLE THE RED* - when the red LED lights, the audio level is at a high enough level to consistently trigger the dynamic controls. The widest dynamic sweeps are possible when moving from green to red; if the level is too high and the red LED stays lit too long, the range of the dynamic sensitive controls will be reduced, conversely, if the level is too low and the red LED does not light consistently, the dynamic sensitive controls will only trigger erratically, so, *TICKLE THAT RED!*
